

Course: Database Administration

Lecturer: Mr. Thear Sophal

Week 5 – Practical Session

Database Backup and Recovery

✓ TODOs

1. Work in a group of 5-6
2. Suppose your group work in a company and work on **Database Backup and Recovery tasks**:
 - a. Choose databases of your choices (either create new databases or existing ones)
3. After having all your databases set up, you need to:
 - a. Write a python script (with sql embedded) to perform database **backup** of 3 of your databases.
 - b. Apply **cron job** (schedule action to perform backup)
 - i. Backup every day at a time of your choice
4. **Loss event**: Assume that 2 of the databases that you backed up were dropped.
5. Now you need to write a Python script (with sql) to recovery those 2 databases

⚠ How to Submit?

In LMS (**one per group**):

1. Submit your database creation file (**.sql**) if you decided to create new databases.
2. Submit your python scripts related to above scenario (**.py or .ipynb**)
3. Submit a small report of your work (**.pdf**)
