

Research Assignment: Analyzing Workflow and Process Design Using Activity Diagrams

1 Question

1. **Why is workflow/process analysis important before developing a software system?**
Explain how process understanding affects software functionality and user experience.
2. **How can Activity Diagrams help identify problems in a system process before implementation? Discuss issues such as:**
 - missing steps
 - repeated activities
 - incorrect decisions or inefficient workflows.
3. **Many software systems fail because of poor process flow rather than coding errors. Do you agree with this statement? Why or why not?**
Provide a real example in this statement!
4. **Choose a real-world system (ATM, food delivery, online shopping, hospital, school registration, etc.) and analyze:**
 - the main workflow/process
 - possible bottlenecks or workflow problems, and how Activity Diagrams could improve the process efficiency.
5. **How do decisions and branching processes affect system behavior in Activity Diagrams?**
Explain why decision points are important in workflow modeling with real case!
